

## Care & Cleaning Guide: High Performance Window Film

---

### For Products

#### Standard and Custom High Performance Window Films

---

### Before You Begin

**Do not use** abrasive cleaners containing chlorine bleach, solvents, or ammonia, as they may damage the surface and alter the integrity of the printed design.

**WARNING: Never mix cleaning agents together, volatile reactions may occur!**

---

### To Properly Clean Everyday Stains

The film can be cleaned periodically using a **mild soap and water solution**. Wet a soft, clean, microfiber cloth with the solution and wipe the window rather than directly spraying solution on the surface of the film.

Work in sections in an upward motion.

Never use harsh chemicals or cleaning agents such as Windex to clean the film surface. The chemicals used in many window cleaning agents can attack the film's adhesive causing delamination from the window.

**Always** respond to dirt, smudges and stains and clean area **immediately** to avoid allowing dirt and or stains to settle into the surface of the wallcovering.

**Always** test an inconspicuous area first to be sure that the surface and ink are not damaged before proceeding.
